

iPhone Camera Basics

9/19/23

Turn ON in Settings - (Scroll to Camera in Settings)

- Use Volume Up for Burst (more on Burst mode below)
- Scan QR codes
- Grid (Great for Photography Rule of Thirds)

Turn OFF in Settings - (Scroll to Camera in Settings)

- Mirror Front Camera (photos will not show printed information backwards)
- View Outside the Frame

Open Your Camera (5 ways):

- Swipe left on the Lock Screen
- From the Lock Screen click on the Camera icon (Lower right-hand side of screen)
- Use the camera icon on your home screen to open the camera (easier to find if placed on the Dock)
- From Control Center click on the Camera App
- Ask Siri to open the camera

Taking a Photo (3 ways)

- Click on the shutter in the open Camera app
- Press either the up or down volume buttons when the Camera app is open
- If you have an Apple Watch, click on the Camera app.

NOTE: THE LAST PHOTO/VIDEO YOU TOOK CAN BE SEEN IN THE SMALL PREVIEW BOX TO THE LEFT OF THE SHUTTER.

Camera Features:

- **Burst Photos (Great for action shots)**

- 1) If turned on in Camera settings, hold the up Volume button as long as you want the action photographed or
- 2) To view the Burst photos go to the Photos app and click on Albums. Scroll to Bursts and click on. Choose the Burst photo out the Bursts album and click on. Click on Select at the bottom on the screen to view all of the burst photos and choose which photos you would like to save.

- **Time-Lapse**

To take best time-lapse photos use a tripod or prop phone, have a full battery and turn off notifications to keep phone steady

- **Slo-Mo**

Slows down and smooths your video

- **Video**

Record video by holding red shutter (move to right to lock it on) or use either Volume button by holding one of them down.

Easy to switch from Photo to Video. Touch and hold shutter to start video. To keep recording drag to locked position.

Taking a photo while taking a video: touch and hold shutter moving it to the right where an additional white shutter appears. Click white shutter to take a photo

- **Photo**

Details below in Photo Features

- **Portrait**

Blurs background and sharpens face

- **Cinematic**

Apply a depth-of-field effect to your videos ([on supported models](#))

- **Pano**

The panorama is a wide shot. It stitches together several images to form a panoramic photo.
