

iPhone Photography Notes

Photo

- Use the camera icon to open the camera. To **quickly** take a photo swipe left on your **LOCK** screen or touch the camera icon on the lower right side.
- Features in PHOTO **BEFORE** taking the photo (gently swipe up on photo screen to see features)
 - Flash choices - Flash Auto, On, or Off
 - Live Photo (takes a short video of your photo and allows you to capture the right moment)
 - 4.3, Square, 16.9 for photo sizing
 - +/- to change exposure
 - Timer - 3s or 10s (allows you to be in photo too)
 - Three circles - changes colorization of photo
 - RAW - a file format for uncompressed digital images that gives you the flexibility to do more with the photo
- Quickly adjust focus and exposure by tapping your screen

Editing your Photos **AFTER** taking the photo: The last photo you take can be accessed on the bottom left hand corner of your camera screen or go to PHOTOS app for complete library.

- In your PHOTOS app album the  at bottom of photo indicates there is information regarding that photo
- All editing tools above can be used to enhance or photo such as saturation, cropping, straightening, etc.
- Live Photo (1 second video of your photo) instructions: On your photo tap Edit, tap LIVE icon, drag frame, tap Make Key Photo

Time-Lapse

To take best time-lapse photos use a tripod or prop phone, have a full battery and turn off notifications to keep phone steady

Slo-Mo

Slows down and smooths your video

Video

Record video using play button or either Volume button.

Easy to switch from Photo to Video. Touch and hold circle to start video. To keep recording drag to locked position.

Portrait

Blurs background and sharpens face

Pano

The panorama is a wide shot. It stitches together several images to form a panorama

Delete Duplicate Photos

Go to ALBUMS at the bottom of the Photos app. Scroll down to Utilities and click on DUPLICATES (will only be there if there are duplicate photos in your library). Merge duplicate photos.

Erasing the Background of a Photo

Go to Photos and click on one you took. Press and hold the image until a white glow appears around it. Click Copy or Share and insert in a message or document.
